Lederbergs Leave U.W. Next Year

A brilliant young husband and wife genetics team, Dr. Joshua and Esther Lederberg, will leave the University next year. Monday, Dr. Lederberg, chairman of the U. W. Medical Genetics Department, was named to a similar post in the Stanford University School of Medicine, Palo Alto, Calif.

Mrs. Lederberg, a project associate in genetics, and Dr. Lederberg were married in 1946. In 1956, the Lederbergs jointly won the Pasteur Award of the Society of Illinois Bacteriologists. The award is made annually to outstanding Midwestern microbiologists. It was made for the first time to a team in 1956.

The Lederbergs' resignation will take effect in April, when his appointment to the Stanford post becomes effective.

Dr. Lederberg, 33, is recognized as one of the country's leading authorities in the field of genetics, the study of heredity.

Dear Joshua:

While admiring these happy faces I wondered if the intuition of Esther played a role in reaching a decision?

Recently a local artist came to see me to ask if she could paint my portrait. I told her that my perception on paintings was -10 and that I have to turn her over to Mr. Link for an wanted

opinion. If Mrs. Link thinks I could survive the 4-6 sessions — I might consider. So tomorrow she

is to take a look at the portraits of famous Madisonians that this lady has made.

I think the modern lenses can do a good job — and I have little interest in what some artist thinks I look like. The lens does not fabricate.

Tonight I had the chance to show our 5 year old Paul Karl Konrad ["]Sputnik II's rocket. First at 8:41 PM. Then again at 10:42 PM.

The little fellow said it looks just like the blushing light of an air-plane high up in the sky - But it has no engine - That's something." Only from the mouths of Babes and Fools comes the truth. "And our grape-fruits are trees from all the 60 acre ["]Coldwater valley gardens with sweet waters & all good things are found therein."
